PROJECT EXPERIENCE

Software-Engineering & Project - Maptek Staff Management Utility
July 2020-Dec 2020

Tools: Html, CSS, agile, javascript, Google sheets,GS-code, Google apps script
the main task of the project is to make the relationship between employees more clear. In the process of web page implementation, we introduced a tree diagram to reflect the direct relationship between employees and the department they are in.
Key responsibility:

- Design and implementation of the front end of the web pages to ensure proper interaction between the front end and google sheets
- Gathering user requirements and designing ideas for implementation
- Continuously revise the code and related functionality in response to changes in user requirements.
- Organize and prepare weekly reports on the team's achievements and progress.

Master of Computing and Innovation Project - Tapping into community-lead software project

Mar 2021 - June 2021

Tools: HTML5/CSS/Javascript, NodeJS/Django, React.js, SpringBoot, PHP. MySql

This project is to create an online interactive web page for Computer Science students. Students can find projects that they are interested in to get involved through this online platform. This platform will also provide students with invaluable experience in participating in real projects and the professors and proposers have a better way to find the potential employees. This project aims to provide a platform for different users (students and professors) to communicate specific information(Proposals of projects/) according to their different needs

Key responsibility:

- Design and implementation of the front-end interface
- Back-end connectivity and project uptime
- Completion testing of the project.
- Deployment of the project to the cloud and ensuring external access to the project.

EDUCATION

University of Adelaide, Adelaide

Master of Computing And Innovation, Computer Science, 12/2021
